PRICE LIST

of Seasonable Seeds of High Grade Quality!

We do not issue an expensive Catalogue, but aim to supply the very best Seeds at reasonable prices, and think we have the very best stock to be found anywhere, as our Seeds were grown on contract for us by the Best Growers.

YOU CAN PLANT FOR THE MONTHS OF MARCH SEPTEMBER

Vegetable Garden.—Sow Beets, Radishes, early Cabbage Kohlrabi, all varieties of Lettuce, Spinach, Mustard, Carrots, Swiss Chard, Leeks, Celery for cutting, Parsley, Cress. Towards the end of this month sow Endive.

Plant all varieties of Bush and Pole Beans; but for Lima Beans it is better to wait until the end of the month, as they rot easily when the ground is not warm enough or too wet.

Squash, Cucumbers, Melons and Okra can be planted. The remark in regard to Lima Beans holds good also for Okra. Early varieties of Peas may still be planted. Set out Tomatoes, Eggplants and Peppers in the open ground and sow seed for later crop. Plant Sweet Corn.

Field.—Sow Sorghum, Kaffir Corn, Teosinte for green feed. Sow all varieties of Clover and Grass seed for hay and grazing.

Plant Irish and Sweet Potatoes, all varieties of Field and Broom Corn. Plant Sorghum, also all varieties of Cowpeas, Canada Field Peas, Soja and Velvet Beans.

Orchard.—Fruit trees may be planted the early part of this month or even later if the season is somewhat retarded.

APRIL OCTOBER

Vegetable Garden.—Sow Bush, Pole and Lima Beans, Sweet Corn, Cucumbers, Squash, Melons and Okra, Beets, Carrots, Swiss Chard, Radishes, Lettuce, Mustard, Endive, Cress, and Celery for cutting. Sow Tomatoes, Eggplants and Peppers. Early Cabbage may be successfully sown. Kohlrabi can be sown, but it is best to sow thinly in drills a foot apart, and thin out to four inches in the rows instead of transplanting.

Field.—Plant Sweet Potato slips or vines for early crop, dig Irish Potatoes planted early, and after well preparing the ground, plant Corn, Beans, Squash, etc. Sow Cashew and Field Pumpkins.

Orchard.—Little is done during the month, except perhaps, if the weather is favorable, budding Orange trees on Trifoliata stools; keep young trees clean of weeds, and during a dry spell water those which were lately transplanted.

MAY NOVEMBER

Vegetable Garden.—Sow as directed for April. Where Potatoes and Onions were taken up, Corn, Melons, Cucumbers, Squash and Pumpkins can be planted. All varieties of early cabbage can be sown this month. During the hot weather Lettuce requires a good deal of water, as it will, if neglected, soon become hard and tasteless. In fact, it is combined with a good deal of labor to raise good Lettuce during the summer months. Celery may be sown now, but must be well shaded, and if the weather is dry, should be regularly watered. Lima and Pole Beans can be planted, the Southern Prolific, Kentucky Wonder and White Creaseback are the best varieties for late planting.

Field.—Cowpeas and Crowders can be planted, the latter is the best to be used green. Sweet Potato slips or vines can still be set but, taking advantage of an occasional rain; but if it does not rain they must be watered, are liable to heat. Grass and Field Seeds, Sorghum, Field and Cowpeas, Soja and Velvet Beans, Field and Broom Corn can also be planted.

Walton's Prize Stock Turnip Seeds

	Oz.	¼ Lb.	Lb.
RED OR PURPLE TOP FLAT (Strap Leaved).—The most popular flat sort, white, with purple top. Flesh, sweet and tender10	\$.20	\$.75
